编译环境:

操作系统: debian=wheezy (linuxcnc 官网下载的镜像)

1 configure: error: libmodbus3 not found! install with "sudo apt-get install libmodbus-dev" or disable with "configure --without-libmodbus"

解决:

sudo apt-get install libmodbus-dev

2 configure: error: libusb-1.0 not found! install with "sudo apt-get install libusb-1.0-0-dev" or disable with "configure --without-libusb-1.0

解决: sudo apt-get install libusb-1.0-0-dev

3 checking for tcl... tclConfig.sh not found, trying tcl.h and libs.
If it doesn't work try running ./configure --with-tclConfig=<path to tclConfig.sh>
checking

tcl.h usability... no
checking tcl.h presence... no
checking for tcl.h... no
checking for library containing Tcl_Init... no
configure: error: tcl lib not found

解决: (慎重使用,根据本人经验,后面可能还需要更换成 tcl8.5 和 tk8.5,若遇到这样问题,可以到群 302377173 咨询)下载老版本 tcl8.4.20 安装(测试过 tcl8.4.5 不行,所以并不是 8.4 所有版本都可

以): 解压 tk8.4.20-src.tar.gz,进入目录 tk8.4.20/unix,运行./configure --prefix=/usr/share/mytcl (安装目录),之后运行 make; make install,这样 tk 相关的文件就被安装到了/usr/share

目录下的几个文件夹中了

同时需要下载 tk8.4.20,安装方法同上

4. configure: error: BWidget not found! install with "sudo apt-get install bwidget"

解决: 按提示进行安装便可

上述安装老版本不妥,下次亦可尝试: --with-tkConfig=/usr/lib/tk8.5/tkConfig.sh --with-tclConfig=/usr/lib/tcl8.5/tclConfig.sh

If you're building the current master (2.6pre) you need an additional dependency

sudo apt-get install libboost-python-dev

I have gotten this error a couple times

"configure: error: Tcl and Tk versions must be the same,...."

try adding:

--with-tkConfig=/usr/lib/tk8.5/tkConfig.sh --with-tclConfig=/usr/lib/tcl8.5/tclConfig.sh

to the ./configure command 302377173 LinuxCNC/EMC2

- 5、sudo apt-get install libboost-python-dev 此动作必要时也可以试试,readline 问题的解决亦可能归咎于此 だお: IIILp://ww
- 6、缺少 readline 的解决: apt-get install libreadline-dev
- 7、 python requires use of tcl8.5 and tk8.5 解决:
 - a、删除原先老版本的 tcl 和 tk 可使用如下命令找到老版本 tcl 和 tk 的目录,并手动删除之:

find / -name tcl8.4

//假设老版本为 tcl8.4

rm -rf /XXX/XXX/tcl8.4

//手动依次删除相应目录

b、查找并删除原先的 tclConfig.sh 和 tkConfig.sh

find / -name tclConfig.sh

find / -name tkConfig.sh

c、安装新版本文件:

apt-get install tcl8.5-dev

apt-get install tk8.5-dev

(注意: 不是 apt-get install tcl 或者 apt-get install tk)

8 rror: python is needed to build LinuxCNC

解决: sudo apt-get install python-gnome2 python-glade2 python-numpy python-imaging python-xlib python-gtkglext1 python-configobj python-gtksourceview2 sudo apt-get install libboost-python-dev

9 checking GL/gl.h usability... no checking GL/gl.h presence... no

checking for GL/gl.h... no

disable-python to skip the parts of LinuxCNC that depend on Python

解决:安装 OpenGL 的依赖库

sudo apt-get install mesa-common-dev libgl1-mesa-dev libglu1-mesa-dev

sudo apt-get install freeglut3-dev
sudo apt-get install build-essential gdb subversion

sudo apt-get install automake autoconf libtool

LinuxCNC/EMC2

sudo apt-get install libgtk2.0-dev libxmu-dev libxxf86vm-dev
